

TIC 404927661 / HD 38600 — Blind-F harmonic verification
TESS Sectors 1, 27, 35, 61, 87 | $P_{\text{orb}} = 18.536282847$ d | $4f$ semi-amplitude $1.903 \rightarrow 0.100$ ppt (94.8% reduction)

A. Multi-sector light curve folded on the known eclipsing-binary orbit

B. Before eclipse masking: integer harmonics dominate the spectrum

C. After masking both eclipses: the ~ 4.67 -day / $4f$ feature collapses
